

2016 SUMMARY REPORT

Commercial Feed Inspections

PLANT INDUSTRIES DIVISION
BUREAU OF FEED, SEED, AND TREATED TIMBER

Missouri Department of Agriculture Mission Statement

To serve, promote, and protect the agricultural producers, processors,
and consumers of Missouri's food, fuel, and fiber products.

Bureau of Feed, Seed and Treated Timber 2016 Program Review

The Missouri Department of Agriculture (MDA) Plant Industries Division, Bureau of Feed, Seed and Treated Timber assists the state's feed industry and consumers through inspecting and testing product and providing information to consumers to assist in making buying decisions. The Summary Report of 2016 Commercial Feed Inspections includes data from over 1,300 inspections and over 36,000 laboratory tests. This report is provided as an annual review of the bureau's responsibilities and accomplishments and as reference material.

Recognition that livestock feed is a key component in food safety is expanding; therefore, the focus on feed safety continued in 2016. The Missouri Department of Agriculture's Bureau of Feed, Seed and Treated Timber, in cooperation with FDA, plays an important role in food safety through its role in providing inspection and surveillance for Bovine Spongiform Encephalopathy (BSE) prevention and Good Manufacturing Practices (GMP) inspections. Bureau inspectors are trained extensively and hold FDA credentials to carry out surveillance inspections. These inspections ensure animal feed is safe and help protect the safety of the food supply for human consumption.

In 2016, the bureau performed 168 BSE inspections. Staff inspected Missouri feed facilities to review the practices of manufacturers and/or distributors of feed products containing prohibited mammalian protein in compliance with Federal Rule 21 CFR Part 589. These inspections are designed to make sure no prohibited protein is fed to ruminant animals.

Thirteen GMP inspections of federally licensed medicated feed manufacturing establishments were performed by MDA staff in 2016. An additional 60 inspections were conducted at medicated feed production plants not licensed by FDA. Those inspections are a vital part of the food safety initiative for all animal feed. The program is intended to ensure legally approved levels and combinations of drugs and antibiotics are used in feed products and that each facility's housekeeping, records, labeling, cleanliness and other practices are in order.

Food safety is also addressed in the bureau's annual survey of corn produced in the state. In addition to providing test information to manufacturers for crude protein levels, the bureau tests for aflatoxin, fumonisin, vomitoxin and zearalenone. If corn containing toxin levels exceeding FDA guidelines for safe use for livestock is found, notifications are sent immediately to the facility at which the corn was sampled.

The Bureau of Feed, Seed and Treated Timber inspectors responded swiftly to six complaints in 2016 about the quality or safety of feed or feed ingredients. When problems required testing beyond the scope of the feed program or the capabilities of the Missouri Feed Control Laboratory, other agencies were utilized or samples were sent to other laboratories for testing.

The Bureau of Feed, Seed and Treated Timber cooperated with the Plant Pest Program and the USDA to obtain samples from Missouri's 2016 wheat production. All samples collected tested negative for karnal bunt wheat disease. The assurance provided by this testing allows Missouri wheat to be exported to many countries that require the testing.

The Bureau of Feed, Seed and Treated Timber took regulatory action against unlicensed companies or those who failed to file tonnage reports. Those actions are reported in "Violations Other Than Failure to Meet Label Claims."

The Missouri Feed Control Laboratory reported results on 4,512 official samples in 2016. Inspectors routinely collect samples of finished feeds and feed ingredients. Those samples are then tested for adherence to label guarantees. If testing reveals a deficiency or excess from the guaranteed analysis or something of a detrimental nature is found, a Withdrawal from Distribution Order is issued immediately. There were 609 withdrawals issued in 2016, for a statewide compliance rate of 86.50 percent.

A total of 350 service and complaint samples were analyzed in 2016. The total number of samples analyzed by the Missouri Feed Control Laboratory was 4,512, resulting in 36,142 individual assays in 2016.

The Missouri Feed Control Laboratory analyzed 16 customer-formula samples in 2016. Customer-formula feeds are those for which the customer has designed his own ration and asks for specific ingredients in specific quantities to be blended by the manufacturer. Each customer requesting the feed and the manufacturer of the feed received an analytical report showing nutrient levels found in the sample. In addition, customers received a questionnaire to confirm they received the quality of feed requested.

The Excellence in Compliance Award Program recognizes feed companies who have achieved at least 90 percent adherence to label guarantees on five or more samples. The companies must also be up-to-date with all fees and reporting. Ninety-nine companies qualified for that award in 2016. Fifty-four of those are located in Missouri.

In 2013, the Animal Feed Regulatory Program Standards (AFRPS) were established by the Food and Drug Administration (FDA) in cooperation with the Association of American Feed Control Officials (AAFCO) to provide a framework that every state can use to determine the strengths and needs of its program. Implementation of these standards will build uniformity and consistency among state feed regulatory programs and further efforts to develop an integrated food safety system.

In August 2014, Missouri Department of Agriculture became one of 12 states to enroll in the AFRPS, and in September 2015 the department was the recipient of a grant that will assist the Bureau's Feed Inspection Program in fully implementing the 11 standards over the next four years. In conjunction with the same FDA grant, the Missouri Feed Control Laboratory has put plans in place to become ISO/IEC 17025 certified and will expand its testing capability to address analytes and microbiological agents that pose the most prevalent threats to the animal food supply. The laboratory plans to meet these objectives within five years. These improvements will increase inspectional and laboratory capability, resulting in improved safety of the food supply in Missouri and will contribute significantly to an integrated food safety system. In 2016, the Missouri Feed Regulatory program continued its progress in implementing AFRPS. The Missouri Feed Control Laboratory has made changes that move it nearer to ISO 17025 Accreditation.

By implementing AFRPS, the Missouri Department of Agriculture works to achieve its mission: "To serve, promote, and protect our agricultural producers, processors and consumers of Missouri's food, fuel and fiber products".

U.S. Food and Drug Administration Guidelines for Aflatoxin Levels

Corn containing less than 20 parts per billion aflatoxin is considered safe by the U.S. Food and Drug Administration for use in all animal feed. Corn exceeding 20 ppb can be fed only for specific age, weight, and production stage. Corn exceeding 300 ppb must be blended with corn containing little or no aflatoxin before feeding is allowed to specific age, weight, and production stage of livestock. Before corn can be blended for out-of-state shipment, the U.S. Food and Drug Administration must be notified and permission obtained from the Missouri Department of Agriculture for this to be allowed.

U.S. Food and Drug Administration guidelines are as follows:

Aflatoxin Level (in parts per billion)	Commodities & Species
20 ppb	For corn, peanut products, cottonseed meal and other animal feeds and feed ingredients intended for dairy animals; for animal species or uses not specified below, or when the intended use is not known.
20 ppb	For corn, peanut products and other animal feeds and feed ingredients, but excluding cottonseed meal, intended for immature animals.
100 ppb	For corn and peanut products intended for breeding beef cattle, breeding swine or mature poultry (e.g. laying hens).
200 ppb	For corn and peanut products intended for finishing swine (100 pounds or more).
300 ppb	For cottonseed meal intended for beef cattle, swine or poultry (regardless of age or breeding status).
300 ppb	For corn and peanut products intended for finishing beef cattle (i.e., feedlot cattle).

2016 Corn Survey

The Missouri Department of Agriculture is happy again to report the results on our annual monitoring of aflatoxin in corn. This survey has been reported yearly since 1993. We also analyze all customer complaint samples for aflatoxin when symptoms suggest adulteration. Laboratory tests are conducted to determine the average crude protein in corn. In 2016, the average crude protein for corn was 7.38%, higher than 6.94% in 2015's corn crop. Each sample was adjusted to a 13.5% moisture level.

Samples of corn are drawn from counties having an expected production of greater than 1.5 million bushels, with one sample added for each additional two million bushels produced. 211 samples were tested for aflatoxin. Only three positives were found; one below 20 ppb and two in the 50-99 ppb range.

The Missouri Department of Agriculture is committed to food safety and quality for the protection of our state's consumers. Our mission is to continue to serve, promote, and protect the agriculture producers, processors and consumers of Missouri food, fuel and fiber products.

Excellence in Compliance Award

The Excellence in Compliance Award is designed to recognize those companies who have high standards and have met or exceeded a 90 percent rounded average compliance in 2016. Those companies are listed below.

The Missouri Department of Agriculture will issue a certificate to honor those companies that have met or exceeded the following criteria:

- At least five random official regulatory samples must have been taken by a Missouri Feed and Seed inspector and been analyzed by the State Feed Control Laboratory in 2016.
- A 90 percent passing compliance rate on five or more samples must have been achieved for the 2016 calendar year.
- The company labeling the feed or feed ingredient must be in good standing with the Bureau of Feed, Seed, and Treated Timber, retain a Missouri Commercial Feed License, and have all quarterly inspection fees or yearly product listing (pet and specialty pet foods) paid as required.

A total of 99 feed labelers have achieved a 90 percent or better compliance rate in Missouri in 2016.

Fifty-four of these companies maintain an address in the state of Missouri and 45 are located outside of Missouri. A number of companies with out-of-state addresses have manufacturing facilities in Missouri.

SECTION 1

Section One is intended to show the reliability of labelers in meeting their claims for feed quality. Inspections were planned on a random basis. The greater the number of samples taken per labeler, the greater the probability that the consistency in meeting claims shown will represent how well the labeler met guarantees.

SECTION 2

Section 2 lists regulatory actions taken on violations other than failure to meet the guarantees. Violations of the law other than not meeting guarantees include: failure to obtain a Missouri Commercial Feed License, failure to pay inspection fees, negligence in revising the labeling, and failure to label the feed as required by law and as requested by the Missouri Department of Agriculture.
